Bonyan

International Standard grade Catalysts

Founded in 1987 Bonyan Shimi is active in the field of production of catalysts for the petro-chemical industry. During the years the company was growing and made major improvements in their production methods to create better with international standards complying products.

Bonyan Shimi is a chemicals producing manufacturer, selling products to companies in the petro-chemical and other branches of industry. We manufacture and distribute an array of Zinc, HDS and Gamma alumina catalysts. All products are tested and approved by all relevant governmental institutes of Iran.

A strong knowledge-based management team, with a combined more than fifty-years of experience in this industry, incorporated Bonyan Shimi.

Bonyan Shimi is a privately owned company owned and managed by Mr. Mohsen Khatibi who has more than 25 years of experience in this business. He is a leading expert in catalyst manufacturing and made Bonyan Shimi to what it is today.

The Bonyan Shimi Chemist team is eagerly waiting for your specifications. Since Bonyan Shimi is privately owned we have to produce high quality products for industrial use. Give them the challenge they are waiting for.

Bonyan

International Standard grade Catalysts

We produce a variety of catalysts which were solely sold to the Petro-chemical industry in Iran. Due to strategy change at Bonyan Shimi the company started to market some of the catalysts to other branches of industry as well, the targeted branches can be found in the Glass, Cement, Paint and Pigment industry in Iran.

Recently Bonyan Shimi signed a contract with a Dutch Holding company which enables Bonyan Shimi to export their products as well. Our products are in quality far ahead of the Iranian competition and fully compliant with International standards. Bonyan Shimi is ready for a brighter future.

It took our Research and Development team years of testing but now Bonyan Shimi has a TBN-Booster. It is completely compliant with the HiTEC 9306 additive and is a high-performance detergent booster designed to be used in conjunction with the new economic base package HiTEC 9300 C. HiTEC 9306 additive is designed to boost the diesel cleanliness performance of the base package to enable the economic formulation of heavy duty engine oils meeting a minimum performance standard of the API CF specification.

Our aim is to license the product to other high standard companies to produce the TBN-Booster according to our specifications. Bonyan Shimi will market the product at retail level within the Islamic republic of Iran..

Bonyan

International Standard grade Catalysts

Bonyan Shimi produces the following catalysts:

- Zinc-Oxide
- Zinc- Components.
- ZnO-Catalyst
- Zinc-Stearate
- Activated ZnO
- HDS Catalyst
- Gamma -Alumina

It is possible to produce an extruder sample to every shape and size. The technical specifications will be according to customers wishes. Other base catalysts can be produced according customers specifications as well, but depends on which support catalyst is being used in the reactor admixtures and indissoluble admixtures.

in case of ordering it is possible to add that to the base catalyst. In such cases due to technical complexities of the support catalyst, all relevant technical information shall be provided by the customer.

We will be delighted to make a quotation for your company and will include a sample of our standard product. We also produce according to customer specifications and we can prepare a quotation for a tailor made solution. Contact us at the below address.

For export we have a export representative within the company, since the export was exclusively granted to the Dutch Holding company all other export licenses will be sub-licensed by the Dutch Holding company after our approval.
